# TRACKOUT CONTROL MAT

Being able to control the tracking of dirt, rock and other debris by construction vehicles when exiting project sites can be a challenge. Municipalities are enforcing regulations to protect against damage to property and the environment. Failure to properly manage a construction exit may lead to law suits and fines. The most economical and environmentally sound solution is the RubberForm Trackout Control Mat.

Vehicle vibration caused by driving over the Trackout Control Mat removes sediment that might otherwise be tracked onto the road surface. Then RubberForm's highly durable, yet portable and reusable Trackout Control Mats trap the debris as the vehicle passes over. Installation is fast and simple: no digging, laying down gravel or filtering required. At the conclusion of the project simply roll up the mats for transport to your next job site!

## FEATURES

- 100% durable recycled rubber
- Reduces the cost of site clean-up on the road and labor cost
- Marks proper entry and exit locations
- Entire mat rolls up for easy transport
- Can be expanded easily to any width and length needed, just add more mats
- Can be installed on uneven ground
- Made in America

## SPECIFICATIONS

Trackout Control Mat

- 5' x 7'
- 7' x 14'-6"
- 7' x 22'
- 5' x 40'
- 10' x 11'

Single Replacement Block

- 27"L x 4"H x 4.5"W

Single Half Replacement Block

- 13"L x 4"H x 4.5"W

- Custom sizing available upon request
